

Iroquois Grounding

One of the most photographed liner mishaps of the pre-World War 2 years was the July 1927 stranding of the Clyde-Mallory Line's flagship *Iroquois*. She and her sister *Shawnee* proved to be the largest vessels Clyde-Mallory ever produced, as well as the last. Although only seven feet longer than the Mohawk-class liners, *Iroquois* and *Shawnee* were considerably grander internally, and carried 300 more passengers.
